**Def RGB:** RGB hex value for user-define color. The parameters are valid only for the work modes with SPI signal output.

**LuxSet:** Daylight sensor threshold (10, 30, 50, 100, 150, 200lux, OFF), with sufficient ambient light, the PIR sensor does not turn on the light.  
The digital value after \* is current detected LUX value.

**OFF:** Set the way of turning off light when the induction control process finished.

**Delay sync:** Turning off the light at the same time after the delay time.

**One by one:** Turning off the light one by one from head to tail.

**Push:** Switch two kinds of push switch input modes.

**Cascade:** The push switch input work as cascade input/output or simulated PIR inductive input.

**All-on:** The push operation will turn on all light and turn off synchronously after the delay time.

## Two stair light controller cascade connection

The downstairs light controller connects Up direction PIR sensor and daylight sensor. The upstairs light controller connects Down direction PIR sensor and daylight sensor. Two stair light controllers connect cascade UP/DW line. When induction light control process is over, the light will turn off after 10s automatically. For speed 1-8 level(cascade input), the turn off delay time is 90/80/70/60/50/40/30/20s respectively.

Note:the push switch function must be set as cascade input.

## Two Push switch as up/down induction signal input connection

The under push switch connect cascade UP port of the stair light controller. The up push switch connect cascade DW port of the stair light controller. The push switch operation will ignore daylight sensor threshold setting.

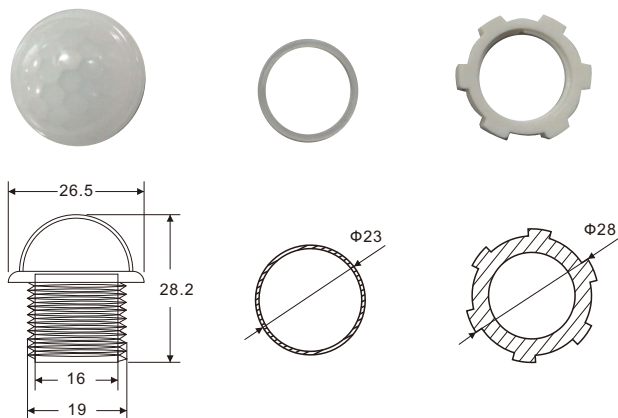

When the push switch function be set as cascade input/output, the push operation will start induction light control process.

When the push switch function be set as button input, the push operation will turn on all light, and the light will turn off after 20s automatically. For speed 1-8 level, the turn off delay time is 90/80/70/60/50/40/30/20s respectively.

## Notice for installation of PIR sensor

1. If the sensor is exposed to direct sunlight, interference signal will be introduced.
2. The sensor should be installed in a dry environment and keep away from windows, air conditioner and fans.
3. Make sure that the sensor stays away from heat source, such as countertops, kitchen appliances which generate hot steam, walls and windows in direct sunlight, air conditioner, heating, refrigerators, stoves and so on.
4. We recommended that wall-mounted installation height is 1-1.5 meters and that ceiling mounting height is no more than 3 meters.
5. There should not be shelter (screen, furniture, large bonsai) within the range of detection.
